Q1. Computer Networks

A network is a set of devices connected by communication links. A node can be a computer, printer or any other device., capable of sending and receiving data generated by other nodes on the network. A Computer network is an interconnection of two or more computers that are able to exchange information.

- The computer may be connected via any data communication link, like copper wires, radio links etc. They may be personal computers or large main frames.
- The computer network may be located in a room, building, country or anywhere in the world.
